SUMMARY

GTM Engineer building AI-enabled revenue systems end-to-end — LLM prospecting and enrichment (Claude & OpenAI), paid acquisition, funnel analytics, and multilingual outbound with human-in-the-loop guardrails.

EXPERIENCE

WY Industry — AI Solutions Engineer

North Bergen, NJ | Apr 2026 – Present

Building the go-to-market stack for Soja Foods, a soy-products manufacturer launching in Louisiana — sole owner of acquisition, web, outbound, and analytics.

- Built **sales_ai**, a two-stage LLM prospecting pipeline (Next.js, Claude & OpenAI APIs) that discovers B2B buyers by product and region, enriches firmographic and contact context via structured extraction, and drafts outreach — cutting per-prospect handling from **~15 min manual to a 2–5 min review (~66% lower cost per prospect**, incl. ~\$0.06 inference); exposed as an **MCP server** (official TypeScript SDK) with per-call cost reporting
- Unified three lead sources — **Apollo** exports, Google Places, and LLM discovery — into one schema with canonical-ID dedup, after ruling out **Clay** (email-first enrichment misses phone- and WhatsApp-reachable food ICPs)
- Designed the multilingual outbound system (3 languages) around deliverability and compliance — **SPF/DKIM/DMARC** domain authentication with aggregate-report monitoring, templated personalization, strict per-channel message rules, and a human-in-the-loop send path holding zero credentials
- Shipped the **sojafood.com** lead-capture funnel on Cloudflare (Pages, D1, Functions): /wholesale/ B2B landing page, first-party analytics with A/B significance testing, automated email reporting, and full SEO — captured leads synced to **HubSpot CRM** via API with UTM/gclid attribution
- Ran paid-acquisition experiments on Google Ads (\$742), using conversion tracking to isolate the single converting keyword and generate 3 qualified wholesale leads — then fed the insight back into landing-page copy and targeting

WGBH (PBS) — Data Science Consultant, BU Spark!

Boston, MA | Sep 2024 – Dec 2024

- Defined a passenger-experience metric tree on 20M+ MBTA records; engineered a passenger-centric latency metric adopted as the primary KPI, replacing benchmarks that understated waiting time
- Delivered weekly to a non-technical newsroom; flagship finding — routes serving Environmental Justice communities waited disproportionately long (Route 14: 16+ min average) — supported GBH News reporting and policy advocacy

Tencent — Operations Analyst Intern

Beijing, China | Dec 2023 – Mar 2024

- Codified reproducible topic-keyword patterns into a reusable topic-selection framework, contributing to a cumulative 300K+ increase in video views
- Applied generative AI to content text-cleaning and compliance pre-review SOPs, cutting processing time ~35%

PROJECTS

- Live Multi-API Data Fusion** (Azure, Spark, SQL): ETL pipeline joining three live APIs (MBTA, OpenWeather, Ticketmaster) with schema, timestamp, and rate-limit reconciliation; XGBoost delay forecasting (MAE 3.56 min)
- Predictive Engagement Modeling** (YouTube API, XGBoost): ingestion pipeline over 6,000+ videos; AUC 0.884 classifier powering pre-publication scoring focused on the top-20% candidate pool

EDUCATION

Boston University — M.S., Data Science | Sep 2024 – Jan 2026 · Merit Scholarship

Syracuse University — B.S., Business Analytics, CS Minor | Aug 2020 – May 2024 · Magna Cum Laude (GPA 3.7/4.0)

SKILLS

AI/GTM: LLM prospecting & enrichment (Claude & OpenAI APIs, Claude Code, Codex), MCP servers, Apollo, outbound systems, email deliverability (SPF/DKIM/DMARC), Google Ads, funnel & attribution analytics, A/B testing

Technical: TypeScript (Next.js, React), Python, SQL, Cloudflare (Pages, D1, Functions), HubSpot, Tableau, Git
