SUMMARY

GTM Engineer building AI-enabled revenue systems end-to-end: LLM prospecting and enrichment (Claude and OpenAI), paid acquisition, funnel analytics, and multilingual outbound with human-in-the-loop guardrails.

EXPERIENCE

WY Industry - AI Solutions Engineer

North Bergen, NJ | Apr 2026 - Present

Building the go-to-market stack for Soja Foods, a soy-products manufacturer launching in Louisiana; sole owner of acquisition, web, outbound, and analytics.

- Built **sales_ai**, a cost-tiered LLM prospecting pipeline (Next.js, Claude and OpenAI APIs) covering buyer discovery, enrichment, and outreach drafting, cutting per-prospect handling from **about 15 minutes manual to a 2 to 5 minute review**; exposed as an **MCP server** (official TypeScript SDK) with per-call cost reporting
- Designed a **three-tier qualification funnel** that concentrates paid inference where it matters: free rule-based **ICP scoring** with labeled per-point reasons ranks every imported account, LLM deep research runs only on top-ranked accounts, and research verdicts override the keyword screen in place
- Unified three lead sources (**Apollo** exports, Google Places, LLM discovery) into one schema with canonical-ID dedup so no buyer is contacted twice; kept fixed vendor cost at **\$0 per month** after ruling out **Clay**, whose email-first enrichment misses phone and WhatsApp reachable food ICPs
- Synced outbound into **HubSpot CRM** on a stable external ID so WhatsApp-only leads without email still map one-to-one to contacts; send and reply outcomes update lifecycle stages automatically, giving one CRM view across website inbound and tool outbound
- Built the multilingual outbound system with **guardrails** on cost and deliverability: per-call billing and monthly budget gates; pre-send **MX/Hunter email verification**, a daily send cap with priority ranking, **SPF/DKIM/DMARC** monitoring, and a zero-credential human-in-the-loop send path
- Shipped the **sojafood.com** lead-capture funnel on Cloudflare (Pages, D1, Functions) with first-party analytics, A/B significance testing, and UTM/gclid attribution into HubSpot; paired Google Ads experiments (\$742) isolated the single converting keyword and generated 3 qualified wholesale leads

WGBH (PBS) - Data Science Consultant, BU Spark!

Boston, MA | Sep 2024 - Dec 2024

- Defined a passenger-experience metric tree on 20M+ MBTA records; engineered a passenger-centric latency metric adopted as the primary KPI, replacing benchmarks that understated waiting time
- Delivered weekly to a non-technical newsroom; flagship finding, that routes serving Environmental Justice communities waited disproportionately long (Route 14: 16+ min average), supported GBH News reporting and policy advocacy

Tencent - Operations Analyst Intern

Remote | Dec 2023 - Mar 2024

- Codified reproducible topic-keyword patterns into a reusable topic-selection framework, contributing to a cumulative 300K+ increase in video views
- Applied generative AI to content text-cleaning and compliance pre-review SOPs, cutting processing time about 35%

PROJECTS

- Live Multi-API Data Fusion** (Azure, Spark, SQL): ETL pipeline joining three live APIs (MBTA, OpenWeather, Ticketmaster) with schema, timestamp, and rate-limit reconciliation; XGBoost delay forecasting (MAE 3.56 min)
- Predictive Engagement Modeling** (YouTube API, XGBoost): ingestion pipeline over 6,000+ videos; AUC 0.884 classifier powering pre-publication scoring focused on the top-20% candidate pool

EDUCATION

Boston University - M.S., Data Science, Merit Scholarship

Boston, MA | Sep 2024 - Jan 2026

Syracuse University - B.S., Business Analytics, CS Minor, Magna Cum Laude (GPA 3.7/4.0)

Syracuse, NY | Aug 2020 - May 2024

SKILLS

AI/GTM: LLM prospecting & enrichment (Claude & OpenAI APIs, Claude Code, Codex), MCP servers, Apollo, lead scoring & ICP qualification, outbound systems, email deliverability (SPF/DKIM/DMARC), Google Ads, funnel & attribution analytics, A/B testing

Technical: TypeScript (Next.js, React), Python, SQL, Cloudflare (Pages, D1, Functions), HubSpot, Tableau, Git
